

Book Hub

ABSTRACT

Book Hub is a JAVA project which mimics a book store. Through this project, we can perform all the tasks which we could perform in a real store.

With the help of this you can carry out an online shopping from your home. Here is no compelling reason to go to the crowded stores or shopping centres. To get to this online shopping system all the customers will need to have an email and password to login and proceed your shopping.

POSSIBLE OUTCOMES

- Login as Admin/User.
- Admin can add new books and view all bookings.
- User can place an order for a book and view his/her orders.
- As soon as user places an order, his booking will be added to bookings page.

FUNCTIONALITIES

ADMIN

- Can add new books.
- Can update book stock.
- Can view all bookings details.

USER

- Can make a booking.
- Can view all his bookings.
- Can view all bookings made by him/her.

CONCLUSION

This project has many OOPS concepts such as classes, objects, inheritance, polymorphism etc. It also involves exception handling.

The Internet has become a major resource in modern business, thus electronic shopping has gained significance not only from the entrepreneur's but also from the customer's point of view.

Thank You
